■ TURNKEY VIDEO & MOVIE STREAMING PLATFORM

# Complete Buyer & Administrator Manual

A complete, practical handbook for launching, personalizing, operating, and monetizing your own white-label video streaming membership platform with built-in Direct Mobile Money payments and automated processing.

| | |
|---|---|
| **Product Version:** 1.0 Production Release | **Tech Stack:** Next.js 16 (App Router), React 19, Supabase |
| **Payment Methods:** Direct Mobile Money, Bank & Card | **Hosting Target:** Vercel / GitHub / Docker (Free Tier Friendly) |
| **Manual Payment:** Built-in (No merchant APIs required) | **Status:** Turnkey & 100% White-Label Ready |

## Table of Contents

- **1. Executive Overview & Key Capabilities**
- **2. Launching in 20 Minutes (Supabase & GitHub Repository Setup)**
- **3. Deploying to Vercel & Setting Up Administrator Privileges**
- **4. The Manual Payment System (Mobile Money / Bank Transfer with No APIs)**
- **5. Approving & Managing Customer Transactions in Real-Time**
- **6. White-Label Branding & Localization (Brand Name, Logo, Colors & Currency)**
- **7. Content Management (Movies, TV Series, Seasons, Episodes & 1-Click TMDB)**
- **8. Subscription Plans, Pricing & Pay-Per-View (PPV) Rentals**
- **9. Marketing, Promo Codes & Affiliate CPA Commission Engine**
- **10. Security Shield, FraudGuard, VPN Defense & Cloudflare R2 Video Storage**
- **11. Master Deliverables Summary & Quick Reference**

**Note for Buyers:** Everything needed to run this platform is included in your package. You do not need to purchase expensive third-party tools, paid video servers, or commercial gateway accounts to start making sales.

# 1. Executive Overview & Key Capabilities

This platform is an enterprise-grade, Netflix-style video streaming subscription service. It is architected specifically so anyone can purchase the codebase, rebrand it under their own company name, push it to their personal GitHub account, and run a profitable streaming business with zero ongoing software licensing fees.

- **Modern Streaming Interface:** Dynamic Hero showcase, auto-resuming video player, Continue Watching carousel, category filters, and search.
- **PWA Ready:** Mobile users can install the platform directly onto their iOS or Android home screen with a single tap.
- **Zero-API Manual Payments:** Accept Mobile Money (MTN MoMo, Airtel Money, M-Pesa) or Direct Bank Transfers without requiring business merchant accounts.
- **Automated Payments:** Optional integration with Flutterwave for instant card processing and automated mobile money prompts.
- **Subscription & PPV Monetization:** Sell recurring access passes (daily, weekly, monthly, annual) or rent single movies for 48 hours.
- **Cloudflare R2 Video Delivery:** S3-compatible cloud video storage with **zero egress bandwidth fees**, preventing bandwidth bill shock.

# 2. Launching in 20 Minutes (Database & Code)

Launching your streaming platform requires four simple steps. No complex server configuration or Docker experience is required.

## Step 2.1: Initialize Your Free Database (Supabase)

1. Create a free account at **https://supabase.com** and click **New Project**.
2. Once initialized, click on **SQL Editor** in the left sidebar, click **New Query**, paste the contents of DATABASE_SETUP.sql, and click **Run**.
3. Navigate to **Project Settings > API** and copy your **Project URL**, **anon key**, and **service_role key**.

## Step 2.2: Push Code to Your GitHub

Create a new Private repository at **https://github.com/new**. Inside the clean project directory, run:

```
git init
git add .
git commit -m "Initial commit of my streaming platform"
git branch -M main
git remote add origin https://github.com/YOUR_USERNAME/YOUR_REPOSITORY.git
git push -u origin main
```

# 3. Deploying to Vercel & Administrator Setup

Vercel provides blazing-fast serverless hosting with automatic global CDN distribution and free SSL.

## Step 3.1: Connect Your GitHub to Vercel

1. Log into **https://vercel.com** and click **Add New... > Project**. Import your repository.
2. In **Environment Variables**, configure the required keys shown in the table below and click **Deploy**:

| Variable | Description |
|---|---|
| `NEXT_PUBLIC_SUPABASE_URL` | Supabase Project URL (https://xyz.supabase.co) |
| `NEXT_PUBLIC_SUPABASE_ANON_KEY` | Public Supabase Anon API key |
| `SUPABASE_SERVICE_ROLE_KEY` | Secret Service Role key (for granting subscriptions) |
| `NEXT_PUBLIC_SITE_URL` | Your live production URL (e.g. https://yourdomain.com) |
| `NEXT_PUBLIC_APP_NAME` | Your brand name (e.g. MyStream) |
| `NEXT_PUBLIC_CURRENCY` | Currency symbol (UGX, USD, KES, NGN, EUR, etc.) |
| `CRON_SECRET` | Random secret string for cache warming and cron jobs |

## Step 3.2: Make Yourself Administrator

Visit your live website, register an account with your email, then execute this command in your **Supabase SQL Editor**:

```
UPDATE public.user_profiles SET role = 'administrator' WHERE email = 'your-email@example.com';
```

You now have full access to **/admin** to manage movies, series, payments, and users.

## 4. The Manual Payment System (No APIs Required)

In many countries, obtaining a corporate merchant account for payment gateways like Stripe or Flutterwave can take weeks or be restricted by banking regulations. This platform solves this challenge by including a full **Direct / Manual Payment Engine**.

**How It Works:**
1. The admin configures their personal or business Mobile Money numbers (e.g. MTN MoMo, Airtel Money, M-Pesa), bank account numbers, or crypto addresses in **Admin Settings**.
2. When a customer selects a subscription plan on /checkout, they are presented with the payment receiving numbers with 1-tap **Copy** buttons.
3. The customer sends money via their phone or bank app.
4. The customer inputs their phone number / account name and clicks **'I Have Sent Money (Submit)'**.
5. The system records a pending transaction, alerts the admin, and places the user's account in **Pending Verification** mode.
6. The admin checks their phone statement, clicks **Approve** in the dashboard, and the user's subscription activates instantly!

**Configuring Manual Payments in Admin Settings:**
Navigate to /admin/settings. Scroll to ■ **Manual Payments (No API Required)**:
• **Enable Manual Payment:** Check the box.
• **Payment Method Title:** e.g. *Direct Mobile Money / Bank Transfer*
• **Receiving Numbers & Accounts:**
MTN Mobile Money: 0772123456 (Account: Jane Doe)
Airtel Money: 0752123456 (Account: Jane Doe)
Bank Transfer: Bank XYZ, Acc #1234567890
• **Instructions for Customer:** Enter step-by-step instructions displayed on checkout.

## 5. Approving & Managing Customer Transactions

Managing payments is centralized inside **Admin > Transactions** (/admin/transactions).

- **Filter Tabs:** Quick filters for *All*, ■ *Manual Pending* (with unread counter), ■ *Successful*, ■ *Pending*, and ■ *Failed*.
- **Customer Details:** Displays customer email, plan type, price, and exact phone number or account used to send the payment.
- **1-Click Approve (Green Button):** Validates the transaction, calculates the plan duration, extends the customer's subscription_end_date in the database, and credits any affiliate commission.
- **1-Click Reject (Red Button):** Marks unpaid or fraudulent submissions as failed.
- **Real-Time Customer Redirect:** If the user leaves their checkout screen open while you approve, their browser automatically detects the approval and redirects them to the homepage with active premium access!

# 6. White-Label Branding & Localization

You can customize every visual and textual element of the platform for your specific brand and country.

### Method A: Zero-Code Customization (Admin Dashboard)

In /admin/settings under ■■ **Platform Branding & Currency**:
• **Platform / Brand Name:** Change this to update all headers, emails, and checkout copy.
• **Platform Currency:** Set to UGX, USD, KES, NGN, GHS, TZS, ZAR, EUR, or GBP. All price formatting automatically adapts.

### Method B: In Code (src/config/site.js)

Open src/config/site.js to adjust default brand parameters (tagline, support email, phone numbers, and theme accent colors).
**Logo & Favicon:** Replace public/logo.png with your transparent PNG logo (recommended height 80px) and public/favicon.ico.

# 7. Content Management (Movies, TV Series & TMDB)

The platform offers streamlined content creation with 1-click automatic metadata fetching.

### 7.1 Adding Movies with TMDB Auto-Import

1. Obtain a free API key from **https://www.themoviedb.org** (Settings > API).
2. Save the key in **Admin > Settings > TMDB API Key**.
3. Go to **Movies > Add Movie**. In the **Search TMDB** field, type any movie title (e.g. *Gladiator II*).
4. Click the search result: the poster, backdrop, synopsis, release year, cast, and genres populate instantly.
5. Enter the streaming **Video URL** (Cloudflare R2, direct MP4, or HLS .m3u8).
6. Select Access Mode: **Premium** (requires subscription) or **Free** (available to all registered users).
7. Click **Save Movie**.

### 7.2 Adding TV Series & Multi-Season Episodes

1. Navigate to **Admin > Series** (/admin/series) and click **Add New Series**.
2. Enter the Series Title, Overview, Poster URL, and Release Year.
3. Click into the newly created series:
   • Click **Add Season** (e.g. Season 1).
   • Click **Add Episode**: Enter Episode Number, Title, and Video URL.
4. The player automatically presents an episode list and remembers watch progress.

# 8. Subscription Plans, Pricing & PPV Rentals

Monetization is flexible and customizable without writing any code.

## 8.1 Subscription Plans (/admin/plans)

You can create any combination of passes:
• **Daily Pass:** e.g. 1,000 UGX / $0.99 for 24 hours access.
• **Weekly Pass:** e.g. 5,000 UGX / $3.99 for 7 days access.
• **Monthly Pass:** e.g. 15,000 UGX / $9.99 for 30 days access.
• **3 Months VIP:** e.g. 35,000 UGX / $24.99 for 90 days access.
Each plan has customizable feature bullet points and can be toggled active/inactive at any time.

## 8.2 Pay-Per-View (PPV Movie Rentals)

Allow users to rent a single high-demand movie without committing to a full subscription.
• Enable in **Admin Settings > Pay-Per-View (Movie Rental)**.
• Set rental price (e.g. 3,000 UGX). Users gain access to stream that specific movie for 48 hours.

# 9. Marketing, Promo Codes & Affiliate Engine

## 9.1 Promo Codes & Gift Cards (/admin/promo-codes)

Create promotional coupons (e.g. SAVE50) offering percentage discounts (50% OFF) or fixed deductions. Set maximum usage limits and expiration dates. A conversion-boosting limited-time offer countdown timer can also be enabled in Settings.

## 9.2 Affiliate & Referral CPA Engine

Every user has a unique referral link (/ref/CODE). When a referred user buys a subscription, the referrer earns a commission (flat rate or percentage). Affiliates request payouts via Mobile Money in their portal, which admins approve under **Admin > Payouts**.

## 9.3 Live Telegram Payment Alerts

Receive real-time push alerts on your smartphone whenever a customer submits payment:
1. Open Telegram, search for @BotFather, and create a bot using /newbot.
2. Copy the **Bot Token** and retrieve your **Chat ID** (via @userinfobot).
3. In **Admin Settings**, save telegram_bot_token and telegram_chat_id.

# 10. Security Shield & Video Storage Setup

## 10.1 FraudGuard, IP Shield & VPN Defense

The platform includes built-in cyber defense against scrapers, DDoS bots, and payment abuse.

• **VPN / Proxy Blocking:** Enable under **Admin Settings > Security & VPN Shield**. Choose whether to block VPNs across the entire site or only during checkout.

• **African Carrier Fail-Open:** Special whitelisting ensures legitimate mobile connections (MTN, Airtel, Safaricom) never get falsely blocked.

• **Live Audit Logs:** Inspect blocked attempts, ban offending IPs, and review threat scores in /admin/security-logs.

## 10.2 Cloudflare R2 Video Storage Setup ($0 Egress Fees)

Cloudflare R2 provides S3-compatible video hosting with zero bandwidth egress costs.

1. In your Cloudflare Dashboard, go to **R2 Object Storage** and click **Create Bucket**.
2. Click **Manage R2 API Tokens > Create API Token** with Read & Write access.
3. In **Admin Settings**, paste your **Account ID**, **Bucket Name**, **Access Key ID**, and **Secret Key**.
4. Videos uploaded or scanned from your bucket stream with high-speed CDN delivery worldwide.

# 11. Master Deliverables Summary & Quick Reference

| File / Package | Path in Repository | Purpose |
|---|---|---|
| **Platform Zip Archive** | `movie-streaming-platform-white-label.zip` | Clean 2.1 MB archive ready to deliver to buyers |
| **Clean Source Directory** | `platform-sellable-copy/` | Unpacked source ready for git init & push |
| **Master SQL Setup** | `DATABASE_SETUP.sql` | Single-click schema for Supabase SQL Editor |
| **Buyer Quickstart Guide** | `BUYER_QUICKSTART_GUIDE.md` | 20-minute launch instructions for buyers |
| **Admin Operations Manual** | `ADMIN_USER_MANUAL.md` | Day-to-day admin management handbook |
| **Master PDF Manual** | `Complete_Platform_User_and_Buyer_Manual.pdf` | Printable buyer guide & reference manual |

***End of Master Manual. Turnkey Video & Movie Streaming Platform v1.0.***
